Department of Computer Science and Engineering

ASSESSMENT TOOL 1 – PSEUDOCODE WRITING TASK

Course Code:	CSA0309	Course Title:	Data Structures
CO Assessed:	CO5 – Naturalization (BL4, BL6)	Assessment:	Assessment Tool 1 – Pseudocode Writing Task
Weightage:	35% of CIA	Total Marks:	100
CO5 Statement:	Construct MST using shortest path algorithms and traverse the graph to model and analyse real-world problem.		
Student Name:	K. Ragavi	Reg. No.:	192524364
Section / Batch:	B. Tech AI&DS	Date:	28/08/2026

Code of Conduct

I K. Ragavi (192524364) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: K. Raga

Instructions

- This test contains 5 Pseudocode Writing Task questions. Total: 100 Marks.
- When a student answer using pseudocode writing task should evaluate based on the ability to design clear, logical, and efficient pseudocode solutions for data structure problems.
- No negative marking. Unanswered questions carry zero marks.

Section / Topic	Focus	Q Nos	Marks
Minimum Spanning Tree	Kruskal's Algorithm	1	20
Graph Sorting	Topological Sort	2	20
Shortest Path Algorithm	MST & Dijkstra's Algorithm	3	20
Shortest Path Algorithm	Dijkstra's Algorithm	4	20
Minimum Spanning Tree	Prim's or Kruskal's Algorithm	5	20
GRAND TOTAL:			100 Marks

QUESTIONS

Q1

Minimum Spanning Tree - Kruskal's Algorithm

20 marks

Q2

Graph - Topological Sort

20 marks

Q3

Shortest Path Algorithm - MST & Dijkstra's Algorithm

20 marks

Q4

Shortest Path Algorithm - Dijkstra's Algorithm

20 marks

Q5

Minimum Spanning Tree - Prim's or Kruskal's Algorithm

20 marks

Q1

Minimum Spanning Tree - Kruskal's Algorithm

20 marks

Write pseudocode for constructing an MST using Kruskal's Algorithm. A city planning department needs to connect multiple zones with underground fiber-optic cables. Each zone is represented as a vertex, and possible cable connections between zones are represented as edges with installation costs (weights).

Constraints:

- All zones must be connected
- Total installation cost must be minimized
- No redundant connections (no cycles) allowed
- The network must remain fully connected

Your Answer

KRUSKAL(G)

Input: Graph $G(V, E)$ with weighted edges
Output: Minimum Spanning Tree (MST)

1. MST ← empty set

Q4

Shortest Path Algorithm - Dijkstra's Algorithm

20 marks

Q5

Minimum Spanning Tree - Prim's or Kruskal's Algorithm

20 marks

Q2

Graph - Topological Sort

20 marks

A DAG represents task dependencies. Write pseudocode for Topological Sort using DFS with cycle detection.

Constraints:

- Detect cycle before sorting
- Use DFS approach

Your Answer

TopologicalSort(G):

1. Mark all vertices as unvisited.

2. For each vertex v:

If v is unvisited:

DFS(v)

3. Reverse the stack to get topological order.

QUESTIONS

Q1
Minimum Spanning Tree -
Kruskal's Algorithm
20 marks

Q2
Graph - Topological Sort
20 marks

Q3
Shortest Path Algorithm - MST
& Dijkstra's Algorithm
20 marks

Q4
Shortest Path Algorithm -
Dijkstra's Algorithm
20 marks

Q5
Minimum Spanning Tree -
Prim's or Kruskal's Algorithm
20 marks

Q3 Shortest Path Algorithm - MST & Dijkstra's Algorithm

20 marks

Write pseudocode integrating MST + Dijkstra for Smart transportation system.
Constraints:
a. Use MST for infrastructure
b. Use shortest path for routing

Your Answer

MST_Dijkstra(G, source):

1. MST ← Kruskal(G)
2. Use MST as the transportation network.
3. Set distance[source] = 0.
4. Set all other distances = ∞.

Q4 Shortest Path Algorithm - Dijkstra's Algorithm

20 marks

Shortest Path with "Toll-Free" Voucher: You have a voucher that allows you to traverse one edge for free (weight = 0). Write pseudocode to find the shortest path from S to D utilizing this voucher optimally.

Your Answer

Dijkstra(S, D):
1. Set distance[S] = 0, all others = ∞.
2. Set voucher_used = false.
3. Select the unvisited vertex with minimum distance.
4. For each adjacent edge:
 Calculate normal cost.

Q5 Minimum Spanning Tree - Prim's or Kruskal's Algorithm 20 marks

Second Best Spanning Tree: Design pseudocode to find the "Second Best" MST. (20 Marks)

Hint: Find the MST first, then for every edge in the MST, try removing it and finding the next best edge to replace it.

Your Answer

SecondBestMST(G):

1. MST = Kruskal(G)
2. Best = ∞

3. For each edge e in MST:

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Problem Understanding	20	Demonstrates complete and clear understanding; handles edge cases effectively	Good understanding; minor gaps in edge case handling	Partial understanding; misses some requirements	Misinterprets problem; major gaps
Code Correctness	30	Fully correct; passes all test cases	Mostly correct; minor errors	Partially correct; several test cases fail	Incorrect or non-functional code
Code Quality & Readability	20	Clean, modular, well-commented, follows standards	Readable with some structure	Limited readability; poor structure	Unorganized and hard to read
Complexity Analysis	20	Accurate time & space complexity with justification	Correct but limited explanation	Incomplete or partially correct	Missing or incorrect
Testing & Validation	10	Thorough testing including edge cases	Adequate testing with few edge cases	Minimal testing	No testing evidence
